

Certificate in Phlebotomy Technician

A certificate is the lowest level of all degree types, and is most commonly achieved as a means of career preparation. Certificates are often granted for very concentrated areas of study.

Certified phlebotomy technicians collect, label and transport blood specimens as directed by prescribing physicians or supervising medical professionals. They also record patient data and enter it into computer systems. Certified phlebotomy technicians may work in hospitals, labs, medical offices or blood donation organizations, typically working directly with patients in a fast-paced environment.
